

## Education

---

<b>Edmonton, AB</b>	<b>University of Alberta</b>	<b>Fall 2018 – April 2022 (Expected)</b>
---------------------	------------------------------	--

- B.Sc. Honors in Computing Science – GPA: 3.5.
- **Undergraduate Coursework:** Operating System Concepts, File and Database Systems, Computer Systems and Architecture II, Calculus II, Image Recognition, Software Process and Product Management, GPU Programming.
- **Dean's Honor Roll:** For the 2018-2019 academic year.

---

<b>Lethbridge, AB</b>	<b>University of Lethbridge</b>	<b>Fall 2016 – Spring 2018</b>
-----------------------	---------------------------------	--------------------------------

- B.Sc. in Computer Science with a minor in Economics - GPA: 3.96.
- **Undergraduate Coursework:** Fundamentals of Programming, Discrete Mathematics, Digital Systems, Linear Algebra I, Computer Architecture, Data Structure and Algorithms, Artificial Intelligence, Music Software Design, Statistics I, Practical Software Development.
- **Dean's Honor Roll:** For the 2016 - 2017 and 2017 - 2018 academic years.

## Employment

---

<b>Assistant Engineer, Intern</b>	<b>Huawei Canada</b>	<b>May 2020 – Present</b>
-----------------------------------	----------------------	---------------------------

- Created an automated testing and performance analysis infrastructure to help developers improve compiler performance.
- Performed profiling analysis on AI specific algorithms and improve upon them.
- Developed an ML-guided performance prediction model for LLVM IR.

---

<b>Undergraduate Research Assistant</b>	<b>University of Alberta</b>	<b>September 2019 – January 2020</b>
---	------------------------------	--------------------------------------

- Explored Software Defined Radio using GNU Radio on the ADALM-PLUTO platform.
- Researched real time storage and processing of multiple radio bands on the Ettus X310 SDR platform.

---

<b>Research Assistant, Summer Student</b>	<b>University of Alberta</b>	<b>Summer 2019</b>
---	------------------------------	--------------------

- Developed a real-time occupancy flow and recognition algorithm for a low resolution infrared camera.
- Established 2 Linux servers for machine learning, and algorithmic testing for the university's sustainable computing and networking lab.

---

<b>Research Assistant, Summer Student</b>	<b>University of Lethbridge</b>	<b>Summer 2018</b>
---	---------------------------------	--------------------

- Developed an API written in C++ for a neuromorphic camera using software development techniques to streamline algorithm development and testing.
- Created a comprehensive dataset using the neuromorphic camera to be used by researchers for algorithmic testing and evaluation.

## Projects and Competitions

- 
- **2017 Rocky Mountain Regional ACM ICPC:** Placed 31st out of 52.
  - **2017 Alberta Collegiate Programming Contest:** Placed 28th out of 53.
  - **2017 Lethbridge Collegiate Programming Contest:** Place 4th in Division 2.

## Additional Experience and Awards

- 
- **Teaching Assistant (Fall 2019):** Created assignments for Operating Systems Concepts, and attended lab sessions to help students with course content.

## Skills

- 
- (*Proficient*): C/C++, Python, Linux, Git, Bash, R (*Familiar*): Java, SQL, Scheme, SQLite, Arduino.
  - (*Proficient*): GDB, Valgrind (*Familiar*): gprof, gcov, CppUnit
  - (*Familiar*): ROS

- Microsoft Office Suite (Word, Excel)

### **Leadership and Extracurriculars**

---

- **Undergraduate Association of Computing Science:** Senior Representative (2019-2020)
